

Minutes of the meeting of BoS in IT held on August 20, 2022

The following members were present for the BOS Information Technology Meeting held on **20th August 2022**

- 1. Dr. Sonali Pednekar**
- 2. Dr. Kamatchi Iyer**
- 3. Dr. Rachi Gupta**
- 4. Mrs. Archana Talekar**
- 5. Mr. Sourabh Pandey**
- 6. Dr. Hiren Dand**
- 7. Dr. Jyotika Chheda**
- 8. Dr. Priti Pathak**
- 9. Dr. Vishal D. Borude**
- 10. Mr. Satish Parihar**

The following members discussed and approved the syllabus for TY B.Sc Information Technology, FY Bachelor of Computer Application and SY B.Sc Data Science. They also discussed and approved the proposed certificate courses to be introduced by the department.

With respect to TY B.Sc IT the proposed subjects for Semester V & VI are as follows:

- DevOps
- Artificial Intelligence
- Linux System Administration
- Embedded System & Internet of Things
- Data Warehousing
- Big Data & NoSQL
- Security in Computing
- Node.js, Angular.js & React
- Principles of GLS
- Cloud Computing Fundamentals
- Cyber law & patents
- Virtual Reality & Augmented Reality
- Information Technology Service Management Project
- Advanced Mobile Programming Practical
 - The members suggested to combine data warehousing with mining.

- The introduction of machine learning at TY IT level was discussed and concluded that it would be sufficient for TY level
- The members appreciated the selection of subjects but recommended to align the TY and M.Sc syllabus in order not to lose the students in M.Sc.
- Since Power BI will be introduced in TY IT level , tableau can be introduced in M.Sc Level.

The college and department proposed to introduce a new programme BCA from the next academic year. So, the proposed subjects in FY Sem I & II are as follows.

- Fundamentals of computer
- Programming in c
- Communication Skills
- Object Oriented Programming
- Financial Accounting
- Foundation of Statistical Techniques
- Numerical Methods
- Web Designing & Programming
- Environmental Science
- Digital Electronics
- Economics

- The members discussed the eligibility criteria for the programme with student from any discipline and Maths not being part of HSC would be eligible
- This would open up the market for students seeking admission into computer with no Maths at HSC level
- The course objectives have to be clearly defined in order to differentiate it from Information Technology & Computer Science programme
- Hence the packages, tools & techniques used should be different from traditional B.Sc Course
- The members suggested to make the syllabus more application oriented rather than sticking to core by introducing subjects such as Total Supply Chain Management, Business Economics and Pre-Calculus.

- Students could be given a preference of Maths or Finance as option for elective in 1st year itself but feasibility of this proposal seemed low due to space constraints.
- The members also discussed the need to start with C or Python and then felt for good programming C is must.
- The members also recommended that syllabus has to be designed in a separate way to have separate job market for BCA students and not as in case of IT & CS students

With respect to SY B.sc Data Science, the proposed Subjects for Semester III & IV are same as Mumbai University syllabus. The subjects are as follows

- Semester III

- Research Methods & Ethics
- Data Structures & Algorithms using Python
- Economics
- Data Warehousing & Mining
- Linear Algebra & Discrete Mathematics

- Semester IV

- Testing of Hypothesis
- Big Data
- Fundamentals of Accounting
- Artificial Methods
- Numerical Methods
- The detailed syllabus was discussed and members appreciated the aspects covered in each subjects
- The syllabus of economics and Testing of Hypothesis was likely appreciated and it focused on the outcome.
- The members suggested in TY syllabus propose electives such as health care analyst, financial analyst etc.
- Exam evaluation scheme was discussed and approved.

With respect to credit course, the new courses to be introduced are as follows

- AI & ML (Microsoft Certification)
- Cloud Computing - (Microsoft Azure) (Microsoft Certification)
- UI/UX Design
- Mobile Application Development using MIT App Inventor
 - The members discussed the need for CISCO security and Java/Oracle Certification but being expensive, it would be too difficult to implement.
 - Unity was also suggested but Dept. of Computer Science is introducing & hence not feasible.
 - The members also discussed if any free course is available & options for multiple courses should be allowed.
